Course in Nutrition Labeling

Sixth Edition

Version 6.0

Revised 2020

A self-paced course of study in required and optional nutrition labeling for food products under FDA and USDA regulation.

# TABLE OF CONTENTS

**Introduction** ........................................................................................................................................... 1  
Perspective .................................................................................................................................................. 1  
Where this manual comes in ..................................................................................................................... 1  
How this manual is organized .................................................................................................................. 2  
How to get started ..................................................................................................................................... 2  

**Chapter I: The New Nutrition Labeling: History and Important Features** .............................................. 3  

**Chapter II: The Road Ahead: Preview of Nutrition Labeling** .................................................................. 9  
Basic steps in nutrition labeling ............................................................................................................. 9  
The standard nutrition facts panel ........................................................................................................... 10  

**Chapter III: Determining Regulatory Jurisdiction** .................................................................................. 11  

**Chapter IV: Variability in Nutrition Requirements/Special Populations** ............................................... 13  

**Chapter V: Foods Exempt From Mandatory Nutrition Labeling Requirements or Subject to Different Requirements** ........................................................................................................................................ 15  
Foods subject to special nutrition labeling requirements ....................................................................... 15  
Foods completely exempt from nutrition labeling requirements ............................................................. 15  
FDA-regulated food products exempt from nutrition labeling ................................................................. 16  
USDA-regulated food products exempt from nutrition labeling .............................................................. 17  
Why put nutrition labeling on an exempt food? ....................................................................................... 19  

**Chapter VI: The FDA Voluntary Nutrition Labeling Program** ............................................................. 21  
General provisions ................................................................................................................................... 21  
Participation in a voluntary program vs. nutrition labeling of exempt food in general ......................... 21  
Discontinuation of the USDA Voluntary Nutrition Labeling Program .................................................. 22  

**Chapter VII: Guidelines for Obtaining Nutrient Data** ............................................................................ 23  
‘As packaged’ vs. ‘as prepared/as consumed’ basis for data ................................................................... 23  
Multi-component products ..................................................................................................................... 24  
Acceptable nutrient data sources: USDA vs. FDA ................................................................................ 24  
Acceptable nutrient data sources: USDA guidelines ........................................................................... 25  
Acceptable nutrient data sources: FDA guidelines ................................................................................ 26  
Accuracy requirements ........................................................................................................................... 27  
Practical guidance: database or lab analysis ............................................................................................ 28  
General FDA exemption from nutrition labeling ................................................................................. 28  

**Chapter VIII: Serving Information: Serving Size and Servings Per Container** ..................................... 29  
What are RACCs? ..................................................................................................................................... 29  
Expression of serving size in a household measure .............................................................................. 30  
‘As packaged’ basis for serving size ..................................................................................................... 31  
The serving size/servings per container pathways ................................................................................ 32  
Declaring Serving Size and Servings Per Container ............................................................................. 32  
Determination of Single-Serving Status and Product Type ................................................................... 33  
FDA Voluntary labeling pathway: Raw fish ............................................................................................... 47  
FDA Voluntary labeling pathway: Raw fruits and vegetables ................................................................... 48  
Helpful hints for determining serving size and servings per container ................................................ 49  
RACC tables  
USDA: General food supply .................................................................................................................... 54  
USDA: Infants and toddlers ....................................................................................................................... 57  
FDA: General food supply ......................................................................................................................... 58

*Sixth Edition, updated 04/20*
Chapter IX: Declaration of Nutrient Levels per Serving ................................................................. 69
Selecting nutrients for declaration ......................................................................................................................... 69
Table of mandatory and voluntary nutrients ........................................................................................................ 70
Scaling the nutrient data ........................................................................................................................................ 71
Expressing nutrient levels in the correct units ........................................................................................................ 72
Calculating percent Daily Values .............................................................................................................................. 72
Table of Daily Reference Values ............................................................................................................................ 73
Table of Reference Daily Intakes ............................................................................................................................ 74
Special declaration on foods with low-quality protein .............................................................................................. 76
Rounding quantitative values .................................................................................................................................. 77
Table of Declaration Guidelines for Mandatory and Voluntary Nutrients .............................................................. 78
Checking for agreement of %DVs and quantitative values ....................................................................................... 82

Chapter X: Nutrition Facts Panel Location ........................................................................................................... 85
USDA-regulated products ......................................................................................................................................... 85
FDA-regulated products ........................................................................................................................................... 86

Chapter XI: Nutrition Facts Panel Formatting and Printing .................................................................................... 87
General considerations/gathering information .......................................................................................................... 87
Selecting the Correct Nutrition Facts Panel Content and Format ........................................................................... 88
Nutrition Facts panel formatting questionnaire ........................................................................................................ 89
Selecting the correct panel content based on target population ................................................................................ 90
Selecting the correct starting format ........................................................................................................................ 90
Reduce the size of the panel as allowed by regulation ........................................................................................... 92
Adding a second language ....................................................................................................................................... 97
Fitting the panel to the package ................................................................................................................................ 97
Meeting the graphic requirements ........................................................................................................................ 100
Graphic Requirements for the Nutrition Facts Panel ............................................................................................. 101
The honey bear dilemma .......................................................................................................................................... 102
End of the road?....................................................................................................................................................... 103
Sample Nutrition Facts Panels
Standard Format .......................................................................................................................................................... 104
Standard Side-by-Side Format .................................................................................................................................. 106
Split Standard Format .............................................................................................................................................. 107
Shortened Modification ........................................................................................................................................... 108
Simplified Modification ........................................................................................................................................... 109
Full Tabular Format ................................................................................................................................................ 110
Full Tabular Format with Shortened Modification ................................................................................................. 111
Full Tabular Format with Simplified Modification ................................................................................................. 111
Dual Standard Format ............................................................................................................................................ 112
Dual Full Tabular Format ....................................................................................................................................... 116
Aggregate Format ...................................................................................................................................................... 117
Bilingual Modification ............................................................................................................................................... 118
Small-Package Tabular Format .................................................................................................................................. 119
Small-Package Tabular Format with Shortened Modification ............................................................................... 120
Small-Package Tabular Format with Simplified Modification ............................................................................. 120
Linear Format .......................................................................................................................................................... 121
Linear Format with Shortened Modification .......................................................................................................... 121
Linear Format with Shortened Modification .......................................................................................................... 121

Chapter XII: Nutrient Content Claims ......................................................................
Statements regarding content that are not considered implied nutrient content claims ........................................... 125
When ‘light’ is a nutrient content claim – and when it isn’t ......................................................................................... 126
Summary of authorized/defined nutrient content claims .......................................................................................... 127
Table of authorized/defined nutrient content claims ............................................................................................. 129
Restrictions on the use of nutrient content claims ..................................................................................................... 133
Steps in making a nutrient content claim ................................................................................................................ 134
Check for existing statements that trigger the regulations ......................................................................................... 135
Categorize the product .................................................................................................................................................. 135
Identify new claims you wish to make ....................................................................................................................... 135
Gather necessary information for the product being labeled ..................................................................................... 136
For a relative claim, select a reference product and gather necessary information ................................................... 136
Establish eligibility for the claim .................................................................................................................................. 137
Properly phrase the claim; provide supporting statements ...................................................................................... 138
Comply with graphic requirements .......................................................................................................................... 140
Meet Nutrition Facts Panel requirements ................................................................................................................ 142
Use of nutrient content claims for butter .................................................................................................................. 143
Use of a novel nutrient content claim ....................................................................................................................... 143
Tables of criteria for nutrient content claims
Individual foods (FDA/USDA) .................................................................................................................................. 144
Main dishes (FDA) ........................................................................................................................................................ 152
Meals (FDA/USDA) ....................................................................................................................................................... 158

Chapter XIII: Health Claims .................................................................................................................................. 166
Background .................................................................................................................................................................... 166
Health claim defined ..................................................................................................................................................... 166
Substances that are candidates for health claims ......................................................................................................... 167
Types of health claims .................................................................................................................................................. 167
General health claim labeling requirements .................................................................................................................. 170
Restrictions on health claims ...................................................................................................................................... 170
Steps in making a health claim .................................................................................................................................... 171
Examine the product for existing health claims ...................................................................................................... 171
Table of permitted health claims for food products .................................................................................................... 172
Determine the product type ......................................................................................................................................... 172
Check for general disqualifying/qualifying nutrient levels .......................................................................................... 174
Identify any other claims you would like to make ...................................................................................................... 175
Gather additional information required to check compliance with claim-specific requirements .................................. 176
Determine claim eligibility ........................................................................................................................................... 176
Properly phrase the claim ............................................................................................................................................. 176
Comply with graphic requirements .......................................................................................................................... 177
Meet Nutrition Facts Panel requirements .................................................................................................................. 178
Claim–specific criteria and conditions for health claims ............................................................................................ 178

Conclusion .................................................................................................................................................................... 201
Glossary .......................................................................................................................................................................... 203

Appendices .................................................................................................................................................................. 215
Appendix A: Worksheets for Creating Nutrition Labeling .......................................................................................... 215
Appendix B: Distinguishing Conventional Foods From Dietary Supplements ............................................................ 223
Appendix C: Summary of Menu and Vending Machine Nutrition Labeling Regulations .................................................. 225
Appendix D: Special Allowances Made Under FDA’s Voluntary Nutrition Labeling Program .................................. 227
Appendix E: Nutrient Levels for Foods Under FDA’s Voluntary Nutrition Labeling Program .................................... 229
Appendix F: Major Cuts of Meat & Poultry ................................................................................................................ 233
Appendix G: Table of Equivalencies .......................................................................................................................... 235
Appendix H: The Nutrition Hound’s Checklist of Easily Spotted Nutrition Facts Panel Errors .................................. 237
Appendix I: Examples of Acceptable Graphic Specifications for the Nutrition Facts Panel ........................................... 239

INTRODUCTION

Perspective

Only a few hundred years ago, most of the inhabitants of what we now call the United States of America defined “eating well” as having enough to eat. Food choices were limited, and so was nutrition education: each generation taught the next which foods to consume, and how to either find or raise them. Almost everyone shared responsibility for making sure that there was enough food to go around.

Today, only a fraction of the American population is responsible for making sure that there is enough food to fill everyone’s belly. Knowledgeable Americans increasingly define “eating well” as getting the right balance of energy and nutrients to promote optimal health – a process that involves not only getting enough of certain nutrients, but also avoiding excesses of other nutrients. They value the luxury of being able to make their own choices from a dazzling array of food products. And so, their concern has shifted from “how do you get enough?” to “how do you recognize the right stuff?”

The answer? In part, Federally mandated nutrition labeling.

Where this manual comes in

If you are a food manufacturer or retailer operating under U.S. Food and Drug Administration (FDA) or Department of Agriculture (USDA) regulations, you need to understand the Federal nutrition labeling regulations.

Hence this self-paced course. The following chapters…

- give you background on Federal nutrition labeling regulations and the agencies responsible for enforcing them,
- help you determine the need for nutrition labeling on your food products, and
- offer step-by-step instruction in how to create complete, accurate nutrition labeling.

The emphasis is on the practical details of creating nutrition labeling, including the Nutrition Facts Panel (NFP), that complies with all Federal guidelines. This manual doesn’t simply restate the published regulations; instead, it takes the most important details and concepts and presents them in a logical sequence, along with practical hints that come from years of experience creating real nutrition labeling for real products. For most or all your products, you won’t need to consult any other sources. However, this manual does not address every minor detail or contingency covered in the nutrition labeling regulations; so, if you need additional information on specific topics, consult the sources cited throughout the text.¹

The FDA and USDA have historically had very similar nutrition labeling requirements for food products. With the update to Nutrition labeling finalized by FDA in early 2016, differences with the 1993 USDA

¹ All sources cited may be obtained from the Government Printing Office in Washington, DC or accessed via the Internet. For USDA-regulated products, there are sometimes two citations from 9 CFR, while for non-meat products, there is only one citation from 21 CFR. Meat and poultry products are regulated under authority of two different Federal acts; therefore, the regulations applying to them sometimes appear in different sections of 9 CFR. Anticipating the finalizing of revised USDA Nutrition Labeling regulations, the citations in this manual to USDA Nutrition Labeling regulations refer to paragraphs in the new part 9 CFR 413. If you wish to look up these regulations using the old citations, do the following:

- for meat regulations, simply replace “413” with “317”
- for poultry regulations, replace “413” with “381” and increase the number after the decimal point by 100.

For example, 9 CFR 413.309(d)(1) equates back to 9 CFR 317.309(d)(1) and 9 CFR 381.409(d)(1).
Nutrition labeling regulations were more pronounced. However, prior to a final regulation modifying USDA Nutrition labeling, USDA has permitted Nutrition Facts panels appearing on USDA amenable products to be constructed following the 2016 FDA regulations. This volume reflects the 2016 FDA regulations, making note where appropriate of any special considerations for USDA amenable products.

This volume is designed to serve as a concise reference as well as a self-study course. Therefore, most examples of actual products are located in worksheets at the end of the manual, instead of sprinkled throughout the text. Each worksheet challenges you to apply the principles discussed to “real” products. Applying the rules is the only way we know to really understand them – so please take the time necessary to complete the worksheets, and do not consult the answer keys unless you have answered the questions or get stuck.

Many of you may be picking up this manual in response to the 2016 update to FDA Nutrition labeling. While many of the features of the Nutrition Facts panel have been impacted, the core structure of nutrition labeling remains in place. This volume reflects the 2016 FDA regulations, including voluntarily using Nutrition Facts panels created under the FDA regulations on USDA amenable products.

How this manual is organized

The text is divided into fourteen chapters/modules. Chapters I through XI provide background on nutrition labeling and take you step-by-step through the creation of the Nutrition Facts panel. Chapters XII and XIII cover nutrition claims, statements that are always optional but can do much to enhance product appeal. At the end of this manual, there are worksheets and its corresponding answer key covering key concepts explained in each chapter. After the last chapter, a Conclusion wraps things up and gives you a well-deserved pat on the back.

A Glossary of important nutrition labeling terms used in this manual comes next. Behind it are several Appendices, providing more tools for nutrition labeling and additional information on key points raised in the text.

How to get started

You do not need any labeling or nutrition background to complete this course. You don’t need any other references, either (although you might want to look at certain sections of the Federal regulations cited in the text – that’s up to you). All you need is curiosity, a calculator, a pen or pencil, and a scratch pad. And, of course, some time when you won’t be interrupted and can concentrate.

Appendix A contains sample worksheets that can be used to create and keep records of your nutrition labeling. If you want to work on one of your own products while going through the manual, copy these worksheets and write your answers on the copies.

If you are using the printed form of this manual, we encourage you to copy the worksheets at the back for each chapter, too. Write your answers on the copies. That way, future users of the manual won’t be influenced by your responses.

Take a few moments to get your supplies together and, next time you can carve out some “quiet time,” move on to Chapter I.
